**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# Tensile strength of 67P/Churyumov-Gerasimenko nucleus material from overhangs (Corrigendum)

**Key words.** comets: general – comets: individual: Churyumov-Gerasimenko – methods: observational – errata, addenda

After publication several small errors in the labelled positions of the features described in this paper were found. Correcting these errors results in changes to Table 1 and Figs. 4, 5, and 6. These changes are: the latitude and longitude, as shown in the table and figures, of features 16 and 17 are swapped; and

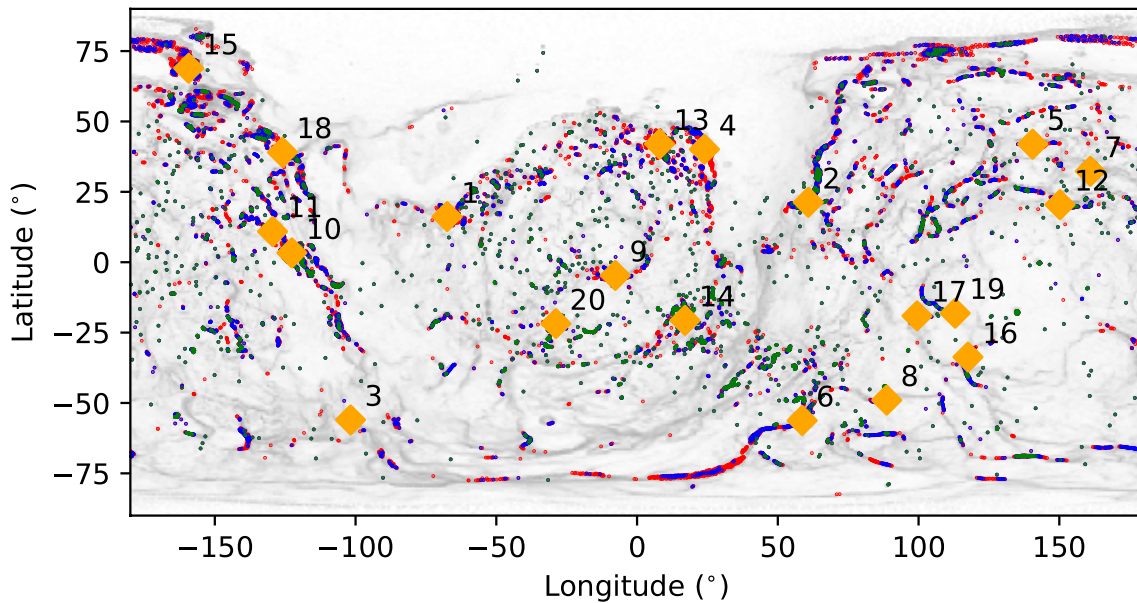

feature 19 was labelled in an incorrect location and has had its latitude, longitude and position in the figures updated. All other data remains the same.

*Acknowledgement.* We thank Andrew Cooper for spotting the above described errors.

**Table 1.** Locations (in the Cheops frame) and properties of each measured overhang.

No.	Latitude (°)	Longitude (°)	$h$ (m)	$L$ (m)	$\sigma_T$ (Pa)
1	16.21	-67.47	109	13	0.17
2	21.29	60.84	113	38	1.65
3	-56.01	-101.77	100	15	0.26
4	40.12	23.93	109	11	0.15
5	41.94	140.53	67	11	0.17
6	-56.22	58.67	106	6	0.04
7	32.32	161.04	41	6	0.08
8	-49.00	88.69	32	5	0.13
9	-4.69	-7.72	33	2	0.01
10	3.33	-122.62	37	12	0.58
11	10.90	-129.46	61	11	0.25
12	20.43	150.23	95	8	0.08
13	41.99	7.99	32	7	0.18
14	-20.69	17.02	43	7	0.13
15	68.89	-159.29	65	11	0.25
16	-33.69	117.56	42	9	0.28
17	-19.06	99.47	47	9	0.19
18	39.06	-125.97	48	8	0.22
19	-18.12	113.00	56	10	0.23
20	-21.81	-28.84	9	6	0.77

**Notes.**  $h$  and  $L$  are the heights and depths, as directly measured from the profiles, while  $\sigma_T$  is derived by numerically integrating the profile shape.

**Fig. 4.** Location of the measured overhangs (orange diamonds). Also shown are high-slope facets on the shape model with the colour scheme: green  $\geq 100^\circ$ , blue  $\geq 90^\circ$ , and red  $\geq 85^\circ$ .

**Fig. 5.** Location of the measured overhangs. The colour scheme shows the tensile strength (unscaled) on a log scale.

**Fig. 6.** Location of the measured overhangs on the shape model.
