HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Author Correction: Efficient generative modeling of protein sequences using simple autoregressive models

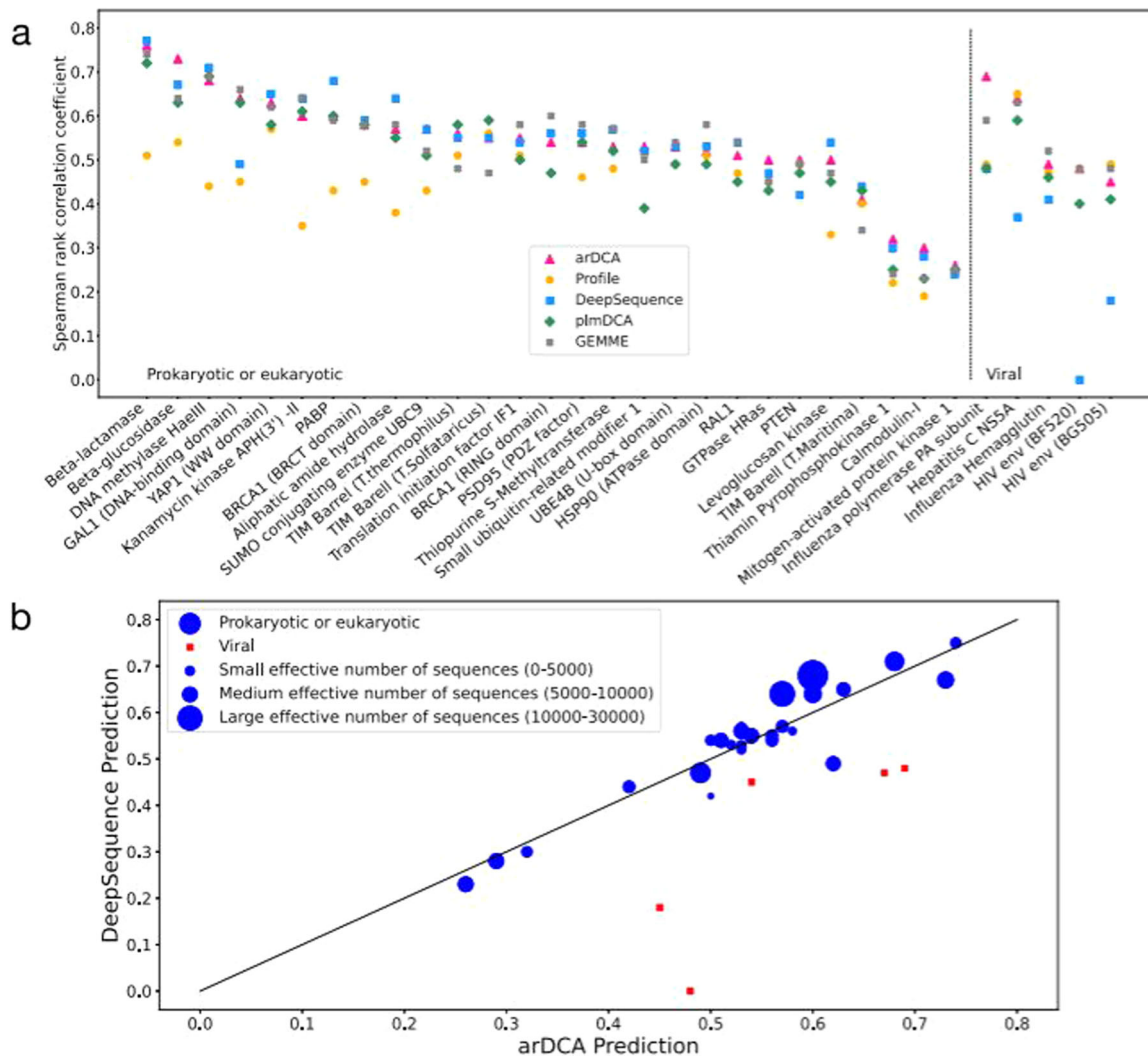

Jeanne Trinquier, Guido Uguzzoni, Andrea Pagnani, Francesco Zamponi & Martin Weigt 

Correction to: *Nature Communications* <https://doi.org/10.1038/s41467-021-25756-4>, published online 04 October 2021.

The original version of this Article contained an error in Fig. 3, in which the predictions presented were run with an incorrect regularization strength. The correct version of Fig. 3 is:

which replaces the previous incorrect version:

In addition, the sentence “Almost all dots are close to the diagonal (apart from few viral datasets), with 15/32 datasets having a better arDCA prediction and 17/32 giving an advantage to DeepSequence.” has been corrected to “Almost all dots are close to the diagonal (apart from few viral datasets), with 17/32 datasets having a better arDCA prediction and 15/32 giving an advantage to DeepSequence”. The sentence “We also add an L2 regularization, with a regularization strength of 0.0001 for the generative tests and 0.01 for mutational effects and contact prediction.” has been corrected to “We also add an L2 regularization, with a regularization strength of $\lambda_j = 10^{-4}$, $\lambda_h = 10^{-6}$ for the generative tests and $\lambda_j = 10^{-2}$, $\lambda_h = 10^{-4}$ for mutational effects and contact prediction.”

This has been corrected in both the PDF and HTML versions of the Article.
