HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Hyperspectral Observer for Venus Reconnaissance (HOVER) Larry W. Esposito, and the HOVER Team.

LASP, University of Colorado, Boulder CO 80303-7820, USA , larry.esposito@lasp.colorado.edu

Abstract

The Hyperspectral Observer for Venus Reconnaissance (HOVER) is a Venus orbiter for remote sensing of its clouds, chemistry, dynamics and surface. Its main goal is understanding the mechanics of the Venus climate. HOVER has the following science objectives: Dynamic meteorology of the cloud layer; Determine distribution of key absorbers and parent gases of the clouds; Characterize super-rotation and solar to anti-solar circulation and compare to observations; Regional rock mineralogy to infer the distribution of continental crust; Monitor for volcanic eruptions. The HOVER mission will address the following key questions:

1. How do convection and chemistry produce the global clouds?
2. Where and how is solar energy deposited?
3. How is energy transported by large-scale circulation?
4. What does Venus climate tell us about past climates?
5. How is Venus current climate impacted by current volcanism?

LASP provides the Project Management, Project Systems Engineering, Mission Management, Orbiter, Payload Integration, Mission Ops, instruments; Science Leadership and Science Data Center. **SwRI** provides the Project Scientist; **Uni-Köln** provides the Radio Occultation investigation.

This proposed mission would address the Decadal Survey priority questions for aqueous environments and life; current habitable environments; understanding climate change on Earth; and Solar System processes.
