Key words. methods: data analysis – techniques: interferometric – dark ages, reionization, first stars – errata, addenda

Some corrections to the original paper are listed below:

- In Fig. 9, the units for the color bar in the top panel should be $\text{K}^2 \text{h}^{-3} \text{cMpc}^3$ instead of $\text{mK}^2 \text{Mpc}^3$.
- In Sect. 4, the baselines used by LOFAR to compute the power spectrum should be “between 50 and 250λ ” instead of “between 5 and 250λ ”.

– In Fig. 4, the caption should begin with “Altitude and beam-attenuated-flux values” instead of “Altitude- and beam-attenuated flux values”.

All of these corrections are only typographical and do not affect the text, results, or conclusions of the paper.
