HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

A&A 662, A65 (2022), <https://doi.org/10.1051/0004-6361/202243096>

Key words. gamma rays: general – supernovae: individual: Kepler – ISM: supernova remnants – radiation mechanisms: non-thermal – errata, addenda

In the version of this article initially published, there was a typographical error in the second paragraph of Sect. 4. The normalization constant should be read $N_0 = (9.5 \pm 2.3_{\text{stat}} \pm 2.9_{\text{sys}}) \times 10^{-14} \text{ cm}^{-2} \text{ s}^{-1} \text{ TeV}^{-1}$. The normalization was correctly stated elsewhere.

Also, the author's name D. Malyshev (affiliated with Institute 23) was inadvertently missing from the author list of the published version. It is added here.
